Senate Technology Committee
1007 East Grand Avenue
Des Moines, Iowa 50319

Re: SF 2197 – “An Act Relating to App Store Provider and App Developer Requirements Concerning Minor Users.” (Oppose)

Dear Chair McClintock and members of the Senate Technology Committee:

On behalf of the Computer & Communications Industry Association (CCIA), I write to respectfully oppose SF 2197. CCIA is an international, not-for-profit trade association representing a broad cross-section of communications and technology firms.¹ Proposed regulations on the interstate provision of digital services therefore can have a significant impact on CCIA members.

CCIA firmly believes that children are entitled to greater security and privacy online. Our members have designed and developed settings and parental tools to individually tailor younger users’ online use to their developmental needs. For example, various services allow parents to set time limits, provide enhanced privacy protections by default for known child users, and other tools allow parents to block specific sites entirely.² This is also why CCIA supports implementing digital citizenship curricula in schools, to not only educate children on proper social media use but also help teach parents how they can use existing mechanisms and tools to protect their children as they see fit.

SF 2197 raises many concerns including proposed age verification and parental consent requirements for covered mobile app store providers and developers. The bill risks subjecting businesses to vague compliance requirements and arbitrary enforcement, while jeopardizing consumer privacy. We appreciate the opportunity to elaborate on these concerns as the Committee considers this proposal.

The U.S. Supreme Court has repeatedly struck down laws containing speech restrictions intended to prevent harm to minors.

In 1997, the Supreme Court held that “the First Amendment does not tolerate” laws that “reduce[] the adult population ... to reading only what is fit for children.”³ Yet SF 2197 effectively does exactly this: in order to restrict access to content potentially harmful to

¹ For more than 50 years, CCIA has promoted open markets, open systems, and open networks. CCIA members employ more than 1.6 million workers, invest more than \$100 billion in research and development, and contribute trillions of dollars in productivity to the global economy. A list of CCIA members is available at <https://www.ccianet.org/members>.

children, the proposed bill would restrict both children and adults' access to such content. The First Amendment applies to teens as well as adults.⁴

Nor do states have the authority to require parental consent for viewing such content; the Court has likewise rejected the argument that "the state has the power to prevent children from hearing or saying anything without their parents' prior consent."⁵ Accordingly, the proposed bills unconstitutionally undermine established free speech protections for users of all ages.

For these reasons, the vast majority of lower courts that have ruled on the issue have held that the First Amendment does not permit states to require age verification to access protected speech.⁶ Most recently, a Texas federal court recently blocked a similar mandate on First Amendment grounds, noting that since "nothing suggests Texas's interest in preventing minors from accessing a wide variety of apps that foster protected speech (such as the Associated Press, the Wall Street Journal, Substack, or Sports Illustrated) is compelling,"⁷ such a law "fails strict scrutiny" and "would fail intermediate scrutiny as well."⁸

Age verification and parental consent requirements undermine user privacy for users of all ages.

SF 2197 contains many requirements that undermine privacy for all users. While well-meaning, age verification mandates inherently require collecting sensitive data about users and adults. Such policies run contrary to the data minimization principles underlying federal and international best practices for privacy protection.⁹ Requiring individuals to share sensitive personal information with third parties, including IDs or biometrics, can make recipients a prime target for identity theft, cyberattacks, or other data breaches.¹⁰

Such dangers are far from hypothetical: Several of the most devastating data breaches in recent years are directly attributable to age verification requirements.¹¹ Furthermore,

government officials could access this sensitive data through enforcement inquiries and processes. Compounding these problems, the bill requires covered online services to retroactively verify the ages of existing users as well as prospective ones, which unnecessarily increases the risk of malicious actors accessing the data submitted.

The more data a service is forced to collect, the greater risk it poses to consumer privacy and small business sustainability.¹² A recent Digital Trust & Safety Partnership (DTSP) report, *Age Assurance: Guiding Principles and Best Practices*, found that “smaller companies may not be able to sustain their business” if forced to implement costly age verification methods, and that “[h]ighly accurate age assurance methods may depend on collection of new personal data such as facial imagery or government-issued ID.”¹³

The Commission Nationale de l’Informatique et des Libertés (CNIL) analyzed several existing online age verification solutions but found that none of these options could satisfactorily meet three key standards: 1) providing sufficiently reliable verification; 2) allowing for complete coverage of the population; and 3) respecting the protection of individuals’ data, privacy, and security.¹⁴ Though the intention to keep kids safe online is commendable, this bill undermines that initiative by requiring more data collection about young people.

Moreover, the bill undermines user privacy without impacting younger users’ ability to access most of the mobile apps in question. Verifying age only for operating system and app store users overlooks access to websites via other means. Numerous apps are designed for web browsers, which this method does not cover. While app store age verification might seem like a comprehensive bulwark against certain content deemed undesirable for younger users, in reality, it falls short of achieving that goal.

SF 2197 assigns covered businesses vaguely defined responsibilities.

SF 2197’s required parental consent disclosures include “[a] description of... [t]he personal data collected by the app from an account holder; and [t]he personal data shared by the app with a third party.” In these disclosures, covered app store providers not “knowingly” misrepresent information, defined as having “actual knowledge or... knowledge fairly inferred based on objective circumstances.” Determining whether knowledge can be “fairly inferred” from “objective circumstances” will almost certainly require case-by-case evaluations of granular details about app stores’ designs, user behavior, and internal processes, balanced against common industry practices.

Because these determinations will be highly fact-specific, covered app stores will not readily be able to determine in advance whether they are complying with the law. Consequently, they will have no way of knowing what measures they need to institute to avoid unknowingly

withholding personal information, or how they are to know whether they are succeeding. Defining covered app stores' obligations in such vague terms risks arbitrary and inconsistent application of the law.

The private right of action would result in the proliferation of frivolous lawsuits and questionable claims, and exorbitant statutory damages.

SF 2197 permits users to bring legal action against persons that have been accused of violating new regulations. The bill would enable “[a] minor, or the parent of a minor, who has been harmed by a violation” to “bring a civil action against an app store provider or a developer” for “the greater of actual damages or one-thousand dollars per violation,” as well as punitive damages “if the violation was egregious.” By creating a new private right of action, the measure would open the doors of Iowa’s courthouses to plaintiffs advancing frivolous claims with little evidence of actual injury. As lawsuits prove extremely costly and time-intensive, it is foreseeable that these costs would be passed on to individuals in Iowa, disproportionately impacting smaller businesses and startups across the state. CCIA therefore recommends granting the state exclusive authority to enforce these requirements.

* * * * *

While we share the concerns of the sponsor and the Committee regarding the safety of young people online, we encourage Committee members to resist advancing legislation that is not adequately tailored to this objective. We appreciate the Committee’s consideration of these comments and stand ready to provide additional information as the Legislature considers proposals related to technology policy.

Respectfully submitted,

Megan Stokes
Director of State Policy
Computer & Communications Industry Association
